

Neuroscience research has become a major focus for countries all over the world. The United States, European nations, Japan, China, India, and other countries have initiated, or plan to

initiate, ambitious brain and neuroscience programs. In the United States, for example, the White House BRAIN Initiative, unveiled by President Obama in 2013, draws support from five federal agencies to drive advances in basic neuroscience research, cognition, traumatic brain injury, and neuropsychiatry, among other fields. Similar efforts from other nations will likely complement or expand this vision, making neuroscience research a top priority for the world scientific community.
