KRISHGEN BioSystems OUR REAGENTS. YOUR RESEARCH.

IMMUNOONCOLOGY ELISA

A RANGE SPECIFIC AND SENSITIVE ASSAYS TO MEASURE AND MONITOR POPULAR PROTEIN TARGETS.

Human, Rat, Mouse and other Animal ELISA & mAb Drug Assays for PK / ADA studies

Recent breakthroughs in immuno-oncology research translate into a paradigm shift with regards to attacking advancing cancer. The benefits of immuno-oncology have resulted in long-lasting tumor regression where surgery, radiotherapy, chemotherapy, and targeted therapy proved less effective.

As the cancer cycle continues, the number of tumor antigens released during cell death significantly increases, thereby strengthening the immune response of the T lymphocytes. Stimulatory factors promote immunity, whereas inhibitory checkpoint proteins, such as CTLA-4 and PD-L1, work at different steps of the cycle to reduce immune activity and, in this manner, also prevent autoimmune responses. A central goal of immuno-oncology therapy is to trigger the cancer-immunity cycle without harming non-tumorous cells.

The Cancer Immunity Cycle

Immuno-therapy approaches for the treatment of cancer fall into the following main categories:

- *Immune Checkpoint Inhibitors* regulators of the immune system, and thus play an integral role in self-tolerance and antigen recognition of the T cell receptors in the process of immune response.
- Monoclonal antibodies that target specific tumor antigens for identification and killing.
- Bispecific antibodies that can bind two targets simultaneously and can be designed to recruit and activate immune cells, to interfere with receptor signaling and inactivate signaling ligands, and to force association of protein complexes.
- Therapeutic vaccines that boost the immune system and have the potential to treat cancer or prevent it from recurring after treatment.
- Adoptive T-cell transfer that work on improving the immune system's anti-cancer response. One type of adoptive T-cell transfer is chimeric antigen receptor (CAR) T-cell therapy, which is used to treat certain blood cancers.

At Krishgen, our dedicated team is focused on identifying and prioritizing the most relevant targets and the latest mAb or bsAb drugs in the pipeline to provide cutting-edge assay solutions.

From target discovery to IVD or clinical phase analysis, we can support you at every stage of your IO research with the right products for your needs. To ensure the best performance when possible, we test and validate our products in the most relevant models in both healthy and diseased tissue and assays.

Krishgen's offers a range of highly validated checkpoint and immune marker ELISA, as well as mAb-based drug assays to enhance and accelerate research on the tumor microenvironment. Each kit is put through rigorous testing to ensure high precision, accuracy, sensitivity, and specificity. You can be confident that you will obtain reproducible results, day-after-day, and lot-after-lot.

High Quality Raw Materials

For superior, reliable results, Krishgen uses high quality, well validated monoclonal antibodies for our Biosimilars ELISA. Our proprietary in-house blockers, buffers, diluents and other reagents are designed to offer optimal noise:signal ratios in every lot.

Production in a ISO 13485 certified facility

Our manufacturing lab is ISO 13485 and CDSCO (India) certified, with Class 7 / Class 8 cleanrooms and Air Handling Units to reduce contamination. Automated plate coating lines and handling equipment further reduce lot variation.

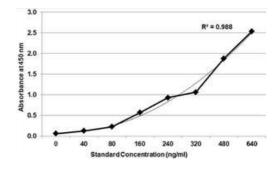

Stringent Validation

All Krishgen ELISA are subject to a stringent SOP for validation that includes the US FDA guidelines for bioassays. A seven-step protocol, each kit undergoes testing for lot-to-lot consistency, dilutional linearity and recovery, precision, stability and sensitivity.

Precision and Reproducibility

Strict quality control guidelines ensure reproducible results, lot after lot. Additionally, Krishgen ELISA clock in at CV<10%, with a recovery between 80 - 120% across all sample types.

For larger lots, we add additional QC steps to ensure inter-assay precision.

Flexible Sample Matrix

While the ready-to-use kits are validated for human serum and plasma samples, our team can optimise and validate any kit for your preferred sample type. Whether it's mouse serum or monkey plasma or anything else let us know and we can validate it for you.

Trusted

Krishgen's reliable ELISA have been used in 1800+ peer-reviewed publications in journals around the world.

Other Available Products from Krishgen:

360+ Therapeutic Drug Monitoring / mAb-based ELISA for Pharmacokinetic research 40+ Bispecific Antibody Drug ELISA Biomarker and Cytokine ELISA for Human, Rat, Mouse and 10+ other species

B7-CD28 Ligand-Receptor Family ELISA

| Target Name | Species | Cat.No. | Other Species Available | | Associated mAb drug ELISA | | | | | |
|-----------------------|----------------|---------|-------------------------|-----|---------------------------|--------------|---------------|------------|--|--|
| | | | Mouse | Rat | | | | | | |
| CTLA-4 | Hu | KBH0277 | • | | Ipilimumab | Tremilimumab | | | | |
| PD-1 | Hu | KBBA50 | • | | Nivolumab | Pidilizumab | Pembrolizumab | Cemiplimab | | |
| PD-1H (VISTA) (B7-H5) | Hu | KBH2153 | | | | | | | | |
| PD-L1 (B7-H1) | Hu | KBBA52 | | | Atezolizumab | Avelumab | Durvalumab | | | |
| PD-L2 (B7-DC) | Hu | KBH4206 | | | | | | | | |
| B7-H4 | Hu | KBH6532 | | | | | | | | |
| CD28 | Hu | KBH3033 | | • | | | | | | |
| CD80 (B7-1) | Hu | KBH7878 | | | Galiximab | | | | | |
| CD276 (B7-H3) | Hu | KBH7878 | | | Ombrutamab | | | | | |
| | | | | | | | | | | |

Chemokines and Chemokine Ligands ELISA

| Target Name | Species | Cat.No. | | | | | | |
|----------------|---------|---------|-------|-----|---------|--------|--------|--------|
| | | | Mouse | Rat | Porcine | Rabbit | Bovine | Others |
| CXCL5 (ENA-78) | Hu | KBH3443 | • | • | | | • | |
| IL-8 | Hu | KB1070 | • | • | •22 | • | | • |
| RANTES (CCL5) | Hu | KB1102 | • | (•) | | | • | • |

Cytokines and Cytokine Receptors ELISA

| Target Name | Species | Cat.No. | Other Species Available | | | | | | | |
|-----------------|---------|---------|-------------------------|-----|---------|----------|--------|--------|--|--|
| | | | Mouse | Rat | Porcine | Rabbit | Bovine | Others | | |
| IFNg | Hu | KB1053 | • | | • | i | • | • | | |
| IL-1b | Hu | KBH8054 | • | • | • | ě | • | • | | |
